

Lee College handed \$50,000 Fluor Foundation grant

Lee College was awarded this month a \$50,000 grant from The Fluor Foundation to support industrial training programs, and provide college scholarships to Goose Creek and Barbers Hill students interested in pursuing industrial careers.

Representatives from Fluor Corp. and The Fluor Foundation presented the \$50,000 check at the December meeting of the Lee College Board of Regents. In addition to scholarships, the grant money will be used to purchase training equipment that enhances hands-on learning in the classroom.

Fluor reached out to Lee College in 2013 to forge a partnership that would address the growing demand for the next generation of skilled workers. Since that time, the company has helped recruit students for industrial training, offered valuable insight about how to improve and update program curricula, and given job opportunities to graduates.

“Fluor has truly proved to be a great industry partner for us,” said Debi Jordan, executive director of the Center for Workforce and Community Development. “They came to the table with not just challenges and problems, but solutions and support. They are very engaged.”

Torrence Robinson, president of The Fluor Foundation and senior director of Global Community Affairs, told the regents that Fluor is dedicated to developing the workforce that industry needs to be successful. Supporting quality educational initiatives is an essential part of that effort, he said.

“We are committed to helping provide the resources that you need to do your job even better, and we look forward to our continued partnership with Lee College,” Robinson said.

Lee College Pres. Dr. Dennis Brown and Board of Regents Vice Chairman Ron Haddox thanked Fluor and The Fluor Foundation for their generosity on behalf of the entire campus community.

“I can’t tell you how much this means to us, and more importantly, how much it means for our students,” Brown said.
